One Blue

Pressure Washer Detergent Kit

Description:

MAG-IT Old Blue Kit is a concentrated mixture of detergents and alkaline builders with co-solvents for use in cleaning heavily soiled surfaces of all types. It may also be used in dilute form to clean heavily soiled or greasy fabrics. It is supplied in kit form and consists of two, one gallon sized containers of dry ingredient(s) and two, one gallon sized containers of liquid ingredient(s).

Directions For Use:

MAG-IT Old Blue Kit should be diluted with water to prepare ready-to-use solutions of MAG-IT Old Blue. Prepare the Old Blue solution by first adding the dry ingredients in the kit to 40 gallons of water. The ingredients should be sifted into the water with stirring. The temperature of the water should rise slightly. When the powdered ingredients have completely dissolved in the water the liquid ingredients should be added slowly with stirring until they have completely dissolved and the product is uniform. The remainder of the water to make 55 gallons at the finish should then be added with stirring.

Prepared solutions of MAG-IT Old Blue should be introduced at rates from 1:20 to 1:50 in standard pressure wash equipment. It may also be diluted a rate of 2 to 12 oz per gallon of water for use as a pre-wash where the Old Blue Kit is sprayed on the surface to be cleaned and followed by a clean water pressure wash to remove road film, dirt, grease, soot and grime. For extremely soiled areas, the undiluted product can be applied with a spray bottle, allowed to sit for a minute or two, and then washed free using a clean water rinse.

Typical Properties:

BOILING POINT: 212°F

SPECIFIC GRAVITY: 1.054

PERCENT VOLATILE BY VOLUME: 90%

VAPOR DENSITY: N/A

EVAPORATION RATE (H₂O = 1): 1

SOLUBILITY IN WATER: Complete

APPEARANCE AND ODOR: Clear blue liquid with a slight odor

pH 1% SOLUTION: 10.0 - 10.2
